A school without drinking water

For the last five years the students of Char Dhurail Kaptai Kanti Free Primary School (most of them being between four and 11 years of age) have been facing acute shortage of drinking water. The fact is that the top of the tubewell standing in the school compound was stolen by unknown miscreants in 1972 following which a G.D. was lodged with the Madaripur P.S. The Pub-

lic Health Engineering Office, Madaripur was also duly informed and application for the supply of its recommissioning was made. But every effort so far has failed to draw the concerned authority's kind attention.

May I request the higher authority to come forward in removing one of the greatest difficulties of the school children.
