

Coaching centres unlimited

Admission in the schools and the colleges are becoming difficult day by day because of the flood of successful candidates crowding these places. The condition is more serious in the technical faculties, like medical, engineering etc. On the one hand technical institutions require higher proficiency and on the other hand the seats are limited in the specialised institutions. Thus even with a good division and a fair knowledge of the subject, many aspirants for admission are rejected. Thus increases the number of the dissatisfied army

LETTERS FROM READERS

of young men and women.

This condition has given rise to a number of coaching centres which attract the students with a promise of admission in the desired institutions after preparing them for the test. This is not altogether bad though these coaching centres charge high fees. They keep the students at least engaged for some time and some students also get the desired result in being admitted in the desired institutions.

There will be about two

hundred coaching centres of different variety in the city alone leaving aside many minor places where TO-FL, SAT and other things are taught. These centres have a good business although there is a great deal of inexperienced teaching.

This condition can be partly changed if the admission policy in the universities modified and mass admission is discouraged by opening more avenue for jobs.
