

Sir.-The then Pakistan Gov. ernment established a Biological Laboratory at Cox's Bazar, Chittagong, to conduct researches in the branches of Marine This Laboratory can play important role in the development of marine fishery

The Bay of Bengal is full a litaffic Engineering fishery resources. Considering the great importance of the Sir—The question of legal fishery resources the Marin clearances (or non-clearances) Bology Laboratory was esta should not delay quick implementation of the sea chore blished by the sea-shore a should not delay quick imple-Cox's Bazar for marine biolo mentation of traffic planning gical researches of the Bay measures to relieve the traffic of Bengal.

extinction due to unscientific use of the resources.

two most important exporting earn a considerable amount of Market area. We see a lot of ł;shery foreign exchange. But these re half hearted measures at a sources will be destroyed if no and other biological researches converted into parking space duction of shrimps prawns ly nipped in the bud. and fishes is not upto the The Government is keenly interested to boost the fisheries production of the country a ming at earning huge! foreign exchange. The resources will be fully exhausted if the stock is not assessed and scientific cultures are practised

So, for the development to fisher es resources it needs extensive researches on marine biology. In this respect the Marine Biology Laboratory at Cox's Bazar can play an important-role. 

. Considering the importance of the fishery resources of the Bay of Bengal, the Department of Marine Biology was established in 1971 funder the Faculty of Science of Chittagong University. The students and teachers have been working in various marine biological researches for the development of marine fisheries resource.

But the prospective marine biologists coming out of this! unique department are not i being utilized properly, although there is a Marine Bological Laboratory at Cox's Bazar. If the marine biologists! are employed, the various marine b.ological researches are possible as well as the unemployment problem of the coun! try will be solved. And it will be possible to increase production of the highly priced fishery commodities. In the Marine Biology Laboratory, the following researches are possible by the em ployment of the marine biolo-i gists:-- Ichthiology, Carcinology. L. Plantology. Malacology. Phycology Microbiology and Bio Chemistry.

In view of the above facts the Cox's Bazar Marine Biology Laboratory should be put to greater use in immediately the greater interest of the country.-Yours, etc., A. K. M. KUTUB UDDIN, Dept. of Marine Biology, Chittagong Univers.tv.

Due to lack of foresight (not Many commercially impor possible at the rate the extant fishery items of the Bay mansion is a taking a place of Bengal are on the Bay mansion parking enaces of Bengal are on the verge of mough parking spaces could not be provided in needed areas along the main throughfares of the city. Now the au-Shrimps and prawns are the thorities have to be firm to wrest back spaces for parking vo most important exporting

commodities which areas. For example take the New snail's pace. The kutcha bazar scientific method of culture should be closed and the area are carried out. The cultural in rickshaws and cars. Ten practices of shrimps, prawns, wards of greenary along the and fishes by the local cul-boundary walls of the Dacca turists along the coastal area College and Teachers Training of the Bay of Bengal are not College may he used for widenscientific but are practised in ing the road and for parking their traditional primitive me-space-in public interest. Senti thod. And as such the pro- mental agitation may be firm-

> The roundabout near the PG at Shahbagh is dangerous, thanks to bad design. Who the island is not being enlarged (lar ger diameter circle) to prevent! straightline driving crossing the intersection? As an interim measure, a beautiful fencing may be put around; the present island. Left turns should be controlled.

The problems at the Nawabpur Gulistan crossing may be tackled in three steps: (a) control traffic, including one-way, two way, diversions: (b) control parking and stoppages of huses within 25 vards; change location of gates BRTC terminal next to children's nark-and at a tater stage remove the erminal Then permanent solution by realignment of the roads in the area of conflict.

The new road on the former railway track: there are many blind spots about every two hundred vards.

One glaring weakness of the traffic police is to allow parking and bus stops near the intersections, turnings (Road 2 Mirpur Road: Elephant road Mirpur Rd.: Azimpur near Eden College, Medical College Gate: Asad Gate Farm Gate: Mohammadpur near BRTC ter, minal (gate 'near crossing to; be closed); Topkhana road at B. Mokarram end (control left and right hand turns): Dhanmandi Road 15-Satmasiid Rd., etc.).

The point is many measures may be taken at once without' expenditure of funds. Committees never work. It is the respons bility of the executive agencies/offices/departments, to solve the problems and take action. : Of 'course the thigher authorities + have + to give prompt decisions. The bureaucratic pace will not solve; the traffic problems. The right men. in the right place with p'enty of powers and decision-making ability can do something. Yours, etc., A. MAWAZ, Daccara
