wined. He said energy crisis was the crisis of resources like oil. Now the main energy could be taken from the solar system since solar energy was easy and nothing was to be paid for the same.

He said that energy crisis must be termed as the crisis of technology only. He said that the energy of sun conserved for a span of two hours and a half would meet the needs of energy of entire world for a full year. This according to him, showed the real dimension of energy. At present energy was being exploited at a huge cost and this also makes a direct baneful effect on ecology and thereby

effect on ecology and thereby it creates real hindrance to development. He said that the Bangladeshi people could get the benefit of solar energy and by the same a new breakthrough could be made in their life style. He also referred to few subsystems like Water, Light, Heat, Wind and Photo-Synthesis and said, these subsystems should be utilised for the water human welfare.
